Cigarette Taxes and Cigarette Smuggling by State

By Joseph Henchman & Scott Drenkard

Public policies often have unintended consequences that outweigh their benefits. One consequence of high state cigarette tax rates has been increased smuggling, as criminals procure discounted packs from low-tax states to sell in high-tax states. Growing cigarette tax differentials have made cigarette bootlegging both a national problem and a lucrative criminal enterprise.

Every two years, scholars at the Mackinac Center for Public Policy, a Michigan think tank, use a statistical analysis of available data to estimate smuggling rates for each state. Their most recent report uses 2011 data and finds that smuggling rates generally rise in states after they adopt large cigarette tax increases. Smuggling rates have dropped in some states, however, often where neighboring states have higher cigarette tax rates. Table 1 shows the data for each state, comparing 2011 and 2006 smuggling rates and tax changes.

New York is the highest net importer of smuggled cigarettes, totaling 60.9 percent of the total cigarette market in the state. New York also has the highest state cigarette tax (\$4.35 per pack), not counting the local New York City cigarette tax (an additional \$1.50 per pack). Smuggling in New York has risen sharply since 2006 (+70 percent), as has the tax rate (+190 percent).

Smuggling takes many forms: counterfeit state tax stamps, counterfeit versions of legitimate brands, hijacked trucks, or officials turning a blind eye.² The study's authors, LaFaive and Nesbit, cite examples of a Maryland police officer running illicit cigarettes while on duty, a Virginia man hiring a contract killer over a cigarette smuggling dispute, and prison guards caught smuggling cigarettes into prisons. Policy responses have included banning common carrier delivery of cigarettes,³ greater law enforcement activity on interstate

Smuggling

roads,⁴ differential tax rates near low-tax jurisdictions,⁵ and cracking down on tribal reservations that sell tax-free cigarettes.⁶ However, the underlying problem remains: high cigarette taxes that amount to a "price prohibition" of the product in many U.S. states.⁷
